

Training Package Development

METHODOLOGY

We consider industry skills needs, Council of Australian Governments (COAG) Industry and Skills Council (CISC) priorities and 2012 Standards for Training Package Development.

Our reviews remove obsolete products, minimise duplication and provide more information on industry's expectations of training delivery. They support individuals to move more easily across occupations.

GOVERNANCE

Training Package Development Projects are overseen by the relevant Industry Reference Committee (IRC).

The IRC establishes a project Technical Advisory Committee (TAC) to guide the project and provide industry expertise for the development of training package components.
